# Testing with Bluetooth Keyboard on iOS

The easiest way to interact with a website or application is to use QuickNav with VoiceOver. QuickNav mimics the swipes in VoiceOver on iOS and provides easy access to Rotor. Turn on Quick Nav to control VoiceOver using the arrow keys. Quick Nav is off by default. Activate the Quick Nav mode, by pressing the right and left arrow simultaneously (move backward and forward through focusable elements).

| Key Command | Action |
|---|---|
| Control – Down Arrow | Select the last item |
| Control – Up Arrow | Select the first item |
| Left Arrow – Down Arrow | Stop interacting with content |
| Right Arrow – Down Arrow | Start interacting with content |
| Left Arrow | Select previous item |
| Option – Arrow Key | Scroll in the direction pressed |
| Right Arrow | Select the next item |
| Right Arrow + Left Arrow | Activates Quick Nav mode by pressing this keys simultaneously. This will move backward and forward through focusable elements. |
| Shift – Arrow Key | Move the cursor in the direction pressed |
| Single-letter Quick Nav for the web | You can also use the number keys on an Apple Wireless Keyboard to dial a phone number in Phone or enter numbers in Calculator. |
| Down Arrow – Up Arrow | Tap the highlighted item |
| Left Arrow – Up Arrow | Move the rotor to the left |
| Right Arrow – Up Arrow | Move the rotor to the right |
| H | Move to next heading |
| L | Move to next link |
| R | Move to next text field |
| B | Move to next button |
| C | Move to next form control |
| I | Move to next image |
| S | Move to next static text |
| X | Move to the next list |
| M | Move to the next element of the same type |
| 1 - 6 | Move to the next heading level that corresponds to the number pressed |
